

**IN THE SPECIFICATION**

Please amend paragraphs [0078], [0079] and [0291] as follows.

[0078] In order to perform the service described above, the wired and wireless interconnecting apparatus 100 includes an apparatus (not shown) for the mobile communication service and endows a subscriber who is registered in the mobile communication phone service with a Mobile Identifier Number (MIN) (for example, 02-CCC-DDDD), and provides wireless terminals ~~230, 250 and 270~~ 220, 240 and 260 placed in ~~[[its]]~~ their private communication area with a mobile communication phone service through the pBTS 210.

[0079] Of course, since the wireless terminals ~~230, 250 and 270~~ 220, 240 and 260 which are registered in the mobile communication service of the wired and wireless interconnecting apparatus 100 are registered in a service of the public mobile communication network and provided with a mobile communication service which uses a general public mobile communication network, the terminals are endowed with separate mobile communication terminal phone numbers (MINs) (for example, 016-AAA-BBBB).

[0291] The present invention can be realized as computer-executable instructions in computer-readable media. The computer-readable media includes all possible kinds of media in which computer-readable data is stored or included or can include any type of data that can be read by a computer or a processing unit. The computer-readable media include for example and is not

limited to, ~~storing~~ storage media, such as magnetic ~~storing~~ storage media (*e.g.*, ROMs, floppy disks, hard disk, and the like), optical reading media (*e.g.*, CD-ROMs (compact disc-read-only memory), DVDs (digital versatile discs), re-writable versions of the optical discs, and the like), hybrid magnetic optical disks, organic disks, system memory (read-only memory, random access memory), non-volatile memory such as flash memory or any other volatile or non-volatile memory, and other semiconductor media, electronic media, electromagnetic media[[,]] and infrared media[[,]], ~~and other~~

The data may be transmitted via a communication medium [[media]] such as carrier waves (*e.g.*, transmission via the Internet or another computer). ~~Communication media~~ The transmission paths of a communication medium generally embodies computer-readable instructions, data structures, program modules or other data in a modulated signal such as the carrier waves or other transportable mechanism including any information delivery media. Computer-readable media may also be transmitted via such as ~~communication media may include~~ a wireless media such as radio frequency, infrared microwaves, and wired media such as a wired network. Also, the computer-readable media can store ~~and execute~~ computer-readable codes that are distributed in computers connected via a network. The computer readable medium also includes cooperating or interconnected computer readable media that are in the processing system or are distributed among multiple processing systems that may be local or remote to the processing system. The present invention can include the computer-readable medium having stored thereon a data structure including a plurality of fields containing data representing the techniques of the present invention.
